Contents

1 Abstract	3
2 The experimental process	3
2.1 Sample information and experimental materials and methods	4
2.2 Standards and reagents	5
2.3 Sample extraction process	5
2.4 Chromatography-mass spectrometry acquisition conditions	9
2.5 Qualitative and quantitative principles of metabolites	10
3 Evaluation of data results	11
3.1 Qualitative and quantitative analysis of metabolites	11
3.2 Sample quality control analysis	16
3.3 Principal Component Analysis (PCA)	19
3.4 Hierarchical Cluster Analysis (HCA)	22
3.5 Sample correlation assessment	24
4 Analysis of data results	25
4.1 Grouping principal component analysis	25
4.2 Discriminant Analysis by Orthogonal Partial Least Squares (OPLS-DA)	28
4.3 Dynamic distribution of metabolite content differences	33
4.4 Differential metabolite screening	34
4.5 Functional annotation and enrichment analysis of differential metabolites in KEGG database	48
5 Reference	56
5.1 Software list and version	56
5.2 FAQ	57
